

### **biology life on earth pdf**

Life is a characteristic that distinguishes physical entities that have biological processes, such as signaling and self-sustaining processes, from those that do not, either because such functions have ceased (they have died), or because they never had such functions and are classified as inanimate.

### **Life - Wikipedia**

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field.

Carbon Dioxide (CO<sub>2</sub>) is a natural constituent of the atmosphere with a density of 747 mg per cubic meter of air. Its concentration in the composition of air is roughly 0.032%; however, of all the organic compounds, carbon dioxide is by far the most important one for the sustainability of the biosphere (the whole of life on Earth).
