Composite Structures, an International Journal, disseminates knowledge between users, manufacturers,
designers and researchers involved in structures or structural components manufactured using composite
materials. The journal publishes papers which contribute to knowledge in the use of composite materials in
engineering structures.

Keywords: Polyamide, recycling, mechanical properties, wear, screw extrusion, composite structures, civil
engineering 1. Introduction Polyamide 6 (PA6) is being increasingly considered as a convenient matrix
material in light-weight carbon-fiber-reinforced, graphene-nanoplatelets-reinforced structures or reinforcing
fibers of cement mortars [1-4].

The use of composite structures in construction is increasing. The optimized combination of the two materials concrete and steel produces particularly cost-efficient structures. This book presents a large number of numerical examples with detailed explanations of the provisions of Eurocode 4.
