Thermodynamics is the branch of physics that has to do with heat and temperature and their relation to energy and work. The behavior of these quantities is governed by the four laws of thermodynamics, irrespective of the composition or specific properties of the material or system in question.

Climate change is now a major concern. The polar ice caps are reported to be melting and sea levels are rising due to an increase in the average temperature of the Earth's atmosphere and oceans. Global warming is driven by increasing levels of tropospheric gases that contribute to the so-called greenhouse effect.

Definitions: The definitions of the terms used throughout this book will be repeated in a number of chapters. The reason for this seeming duplication is to clearly explain the concepts so that a clear understanding is given as to what an accident, near miss incident, or other concept is and how it is defined.

Real-world manipulation of anions needs receptors to operate in solution. By combining experiment and theory, Flood and colleagues discovered a  $1/r$  solvent dependence of solution-phase anion affinities. Surprisingly, electrostatics no longer dominates affinity in solutions of even moderate polarity. Their findings also enable accurate ...

A radiant barrier is a shiny panel or flexible membrane used in construction. Although radiant barriers have no R-value, they can be used as part of a building assembly – for example, an assembly made up of a radiant barrier and an air space – to slow heat transfer.
